

# Hippo 3 Stamp Mill

## Description

The mill pulverizes gold bearing rock into a sandy slime out of which gold can be recovered after passing the muddy slime on a copper Plate, James Tables or concentrator. This is old technology still being applied in modern times due to its popularity in custom milling.

These mills are available as 750lb, 1250 lb and 1450 lb shoed mills. The heavier the shoe the higher the output. Outputs range between 2 ton/hour and 4 ton per hour
